FOOTNOTES FOR TABLE 1, PAGE 1.

*Revised.

NA Not available.

¹Data on olives and raw materials other than those listed no longer collected monthly.

²Data on peanuts collected by Agricultural Marketing Service, U. S. Department of Agriculture, and include reports by peanut shellers.

³Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 2, PAGE 1.

*Revised.

NA Not available.

¹Data on soy flour, lecithin, running bales of linters, cottonseed hull fiber, notes and grabbats no longer collected monthly.

²Effective November 1958 data on running bales and separate data on second cut and mill run linters no longer collected.

³Data collected by Agricultural Marketing Service, U. S. Department of Agriculture.

⁴Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 3, PAGE 2.

*Revised.

NA Not available.

¹Data on olive oil and crude oils other than those listed no longer collected monthly.

²Data on production and stocks held at crude oil mill locations collected by Agricultural Marketing Service, U. S. Department of Agriculture.

³Not shown to avoid disclosure of figures for individual companies.

NOTICE

FACTS FOR INDUSTRY

FATS AND OILS

PUBLICATION DATES FOR THE MONTHS OF MARCH AND APRIL

Listed below are the dates on which fats and oils data will be released covering the months of March and April.

		<u>MARCH</u>	<u>APRIL</u>
M20J	"Vegetable Oil Crushers".....	April 23	May 22
M20K-1	"Fats and Oils Production and Stocks, Consumption of Crude Oil in Refining".....	May 4	June 2
M20K-2	"Fats and Oils Production and Consumption in Selected Products; Factory and Warehouse Stocks"....	May 6	June 5

These data will be released at 10:00 a.m. on the date specified from the Census Bureau, Room 2064, Building No. 3, Suitland, Maryland. Printed copies of the release will be available at 11:00 a.m. on the day specified at the Press Room 3868A, U. S. Department of Commerce.

FACTS FOR INDUSTRY

FOR RELEASE: 10 a.m. E.S.T. April 23, 1959

SERIES: M20J-39 (Preliminary)

FATS AND OILS

MARCH 1959

Vegetable Oil Crushers

Table 1.—RAW MATERIALS AT OIL MILLS: NET RECEIPTS, CRUSHINGS, AND STOCKS,
MARCH 1959-FEBRUARY 1959

FOR RELEASE: June 24, 1959

SERIES: M20J

ERRATA

FACTS FOR INDUSTRY

FATS AND OILS

Revisions in crude cottonseed oil production data for the past seven months were issued on June 11. The corresponding revised figures for cottonseed receipts and crushings, and production of meal, hulls, and linters are given below for the United States and for the State of Tennessee.

These revisions did not affect the data on stocks.

OR RELEASE: June 11, 1959

SERIES: M20J

MASS. INST. TECH.

JUN 17 1959

DEWEY LIBRARY

ERRATA

FACTS FOR INDUSTRY

FATS AND OILS

Crushers' reports have overstated the production of crude cottonseed oil by 1.1 million pounds over the past 7 months. The originally reported and corrected figures for each of the months are as follows:

	As published	As revised
	Millions of pounds	
1958		
October.....	239.1	238.7
November.....	205.2	202.4
December.....	190.0	184.6
1959		
January.....	195.8	188.1
February.....	162.2	152.6
March.....	160.6	148.9
April.....	130.3	116.5
TOTAL.....	1,283.2	1,231.8

This error was detected by the Census Bureau and was confirmed at the source. The adjustment is confined to the figures for Tennessee and the United States. Data for production of cake and meal, hulls, linters, and the quantity of cottonseed crushed were overstated proportionately and revised data will be released in the near future.

INTRODUCTION

The statistics contained in this publication are a summarization of the monthly 1957-1959 figures which have appeared in Facts for Industry (now Current Industrial Reports) Series M20J, Fats and Oils. The figures shown include all revisions to date and, therefore, supersede those published in previous issues.

The information contained in this report is limited to figures on receipts, and crushings of oilseeds; production of crude vegetable oils, oilseed cake and meal and other byproducts; and stocks of seeds, crude oil, cake and meal, and byproducts at oil mills.

Reports are collected on a calendar month basis. However, some companies which maintain their records on an accounting month, were permitted to file noncalendar month reports of four or five weeks, where converting to a calendar month basis would have been unusually burdensome or would have unduly delayed their reports. A review of the reports for January 1960 indicated that reports from 82 of the 379 crushing mills were on an accounting month basis. Such mills accounted for about 30 percent of

the cottonseeds and 10 percent of the soybeans crushed. These percentages will probably vary with the season.

The effect of variations in the period covered in the M20J reports may be greater for the stock figures than for the production figures. In each month some of the accounting periods relate to four weeks, and others to five, and the effect on the production totals may be compensating. On a quarterly basis, the calendar month and accounting month totals will coincide more closely.

Effective November 1958, the M20J survey was confined to collecting information on the crushing of the principle oilseeds; cottonseed, soybean, flaxseed, copra, corn, peanut, palm kernel, and tung. Information on the production of soyflour, lecithin, running bales of linters, cottonseed hulls, and motes and grabbots are no longer collected.

Additional information relating to the operation of refineries and consumers for 1959 will appear shortly in a Current Industrial Report Series M20K.

Castor (No. 1 and No. 3).....	(³)	(³)	(³)	(³)

FOOTNOTES FOR TABLE 1, PAGE 1.

*Revised.

NA Not available.

¹Data on olives and raw materials other than those listed no longer collected monthly.²Data on peanuts collected by Agricultural Marketing Service, U.S. Department of Agriculture, and include reports by peanut shellers.³Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 2, PAGE 1.

*Revised.

NA Not available.

¹Data on soy flour, lecithin, running bales of linters, cottonseed hull fiber, motes and grabbots no longer collected monthly.²Effective November 1958 data on running bales no longer collected.³Data collected by Agricultural Marketing Service, U.S. Department of Agriculture.⁴Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 3, PAGE 2.

NA Not available.

¹Data on olive oil and crude oils other than those listed no longer collected monthly.²Data on production and stocks held at crude oil mill locations collected by Agricultural Marketing Service, U. S. Department of Agriculture.³Not shown to avoid disclosure of figures for individual companies.

NOTE: Effective immediately, reports previously published under the general title of "Facts for Industry" will carry the designation "Current Industrial Reports."

FOOTNOTES FOR TABLE 1, PAGE 1.

*Revised.

NA Not available.

¹Data on olives and raw materials other than those listed no longer collected monthly.

²Data on peanuts collected by Agricultural Marketing Service, U.S. Department of Agriculture, and include reports by peanut shellers.

³Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 2, PAGE 1.

NA Not available.

¹Data on soy flour, lecithin, running bales of linters, cottonseed hull fiber, notes and grabbots no longer collected monthly.

²Effective November 1958 data on running bales no longer collected.

³Data collected by Agricultural Marketing Service, U.S. Department of Agriculture.

⁴Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 3, PAGE 2.

NA Not available.

¹Data on olive oil and crude oils other than those listed no longer collected monthly.

²Data on production and stocks held at crude oil mill locations collected by Agricultural Marketing Service, U.S. Department of Agriculture.

³Not shown to avoid disclosure of figures for individual companies.

Table 4. —COTTONSEED: NET RECEIPTS, CRUSHINGS, AND STOCKS AT OIL MILLS, BY STATES,
FEBRUARY 1960—JANUARY 1960

3.

(Thousands of short tons)

State	Net receipts at mills ¹		Crushed or used		Stocks at mills	
	February 1960	January 1960	February 1960	January 1960	February 29, 1960	January 31, 1960
United States.....	113.0	165.5	613.0	661.3	1,445.4	1,945.4
Alabama.....	3.0	5.0	21.2	23.6	34.8	53.0
Arizona.....	14.8	29.3	38.2	41.0	56.0	79.4
Arkansas.....	9.8	7.3	71.3	61.2	119.0	180.5
California.....	6.2	18.3	76.7	78.4	325.6	396.1
Georgia.....	6.9	4.7	22.4	15.7	27.8	43.3
Louisiana.....	19.5	17.4	31.4	33.9	13.0	24.9
Mississippi.....	4.5	6.7	63.4	68.8	114.9	173.1
North Carolina.....	13.3	9.0	23.1	24.3	20.8	30.5
Oklahoma.....	(²)	(²)	(²)	(²)	(²)	(²)
South Carolina.....	2.4	4.0	4.1	11.5	5.9	7.6
Tennessee.....	6.4	9.3	53.5	47.1	127.4	174.5
Texas.....	28.8	40.3	174.0	216.5	509.4	654.7
All other.....	(³)	14.2	33.7	39.3	91.4	127.8

Note: Detail figures may not add to totals because of independent rounding. ¹Net receipts for each state are derived from the quantity of seed crushed and the net change in stocks. ²Included in "All other" to avoid disclosure of figures for individual companies. ³Receipts exceeded by reshipments of previously held seed. Hence, United States total is less than the sum of data for states.

CURRENT INDUSTRIAL REPORTS

FOR RELEASE: 4 p.m. E.D.T. May 17, 1960

SERIES: M20J

CHANGE SHEET

FATS AND OILS

SEPTEMBER 1959-MARCH 1960

Crushers' reports have overstated the production of crude cottonseed oil by 46.5 million pounds over the past 7 months. This error was detected by the Census Bureau and was confirmed at the source. The adjustment is confined to the figures for Louisiana, Texas, North Carolina, and the United States. Data for production of cake and meal, hulls, linters, and the quantity of cottonseed crushed were overstated proportionately. The originally reported and corrected figures for each of these months appear below. These revisions did not affect the data on stocks.

Table 4.--COTTONSEED: NET RECEIPTS, CRUSHINGS, UNITED STATES AND SELECTED STATES,

FOOTNOTES FOR TABLE 1, PAGE 1.

* Revised.

NA Not available.

¹Data on olives and raw materials other than those listed no longer collected monthly.

²Data on peanuts collected by Agricultural Marketing Service, U.S. Department of Agriculture, and include reports by peanut shellers.

³Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 2, PAGE 1.

* Revised.

NA Not available.

¹Data on soy flour, lecithin, running bales of linters, cottonseed hull fiber, motes and grabbots no longer collected monthly.

²Effective November 1958 data on running bales no longer collected.

³Data collected by Agricultural Marketing Service, U.S. Department of Agriculture.

⁴Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 3, PAGE 2.

* Revised.

NA Not available.

¹Data on olive oil and crude oils other than those listed no longer collected monthly.

²Data on production and stocks held at crude oil mill locations collected by Agricultural Marketing Service, U.S. Department of Agriculture.

³Not shown to avoid disclosure of figures for individual companies.

INTRODUCTION

The statistics contained in this publication are a summarization of the monthly 1958-1960 figures which have appeared in Current Industrial Reports Series M20J, Fats and Oils. The figures shown include all revisions to date and, therefore, supersede those published in previous issues.

The information contained in this report is limited to receipts and crushings of oilseeds; production of crude vegetable oils, oilseed cake and meal and other byproducts; and stocks of seeds, crude oil, cake and meal, and byproducts at oil mills.

Reports are collected on a calendar month basis. However, some companies which maintain their records on an accounting month, were permitted to file noncalendar month reports of four or five weeks, where converting to a calendar month basis would have been unusually burdensome or would have unduly delayed their reports. A review of the reports for January 1960 indicated that reports from 82 of the 379 crushing mills were on an accounting month basis. Such mills accounted for about 30 percent of the

cottonseed and 10 percent of the soybeans crushed. These percentages will probably vary with the season.

The effect of variations in the period covered in the M20J reports may be greater for the stock figures than for the production figures. In each month some of the accounting periods relate to four weeks, and others to five, and the effect on the production totals may be compensating. On a quarterly basis, the calendar month and accounting month totals will coincide more closely.

Effective November 1958, the M20J survey was confined to collecting information on the crushing of the principal oilseeds; cottonseed, soybean, flaxseed, copra, corn, peanut, palm kernel, and tung. Information on the production of soyflour, lecithin, running bales of linters, cottonseed hulls, and motes and grabbots are no longer collected.

Information relating to the operation of refineries and consumers for 1960 will appear in Current Industrial Reports Series M20K.

²Suppressed. Dry millers accounting for approximately 15 percent of corn oil production, indicate they can not accurately report the quantities of corn germs crushed or cake and meal produced.

Figures reported for all producers (wet and dry process) indicate that the average yield per ton of corn germ in 1960 was 610 pounds of oil and 0.64 tons of cake and meal compared to 620 pounds of oil and 0.61 tons of cake and meal in 1959.

FOOTNOTES FOR TABLE 1, PAGE 1.

*Revised.

NA Not available.

¹Data on olives and raw materials other than those listed no longer collected monthly.

²Data on peanuts collected by Agricultural Marketing Service, U.S. Department of Agriculture, and include reports by peanut shellers.

³Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 2, PAGE 1.

*Revised.

NA Not available.

¹Data on soy flour, lecithin, running bales of linters, cottonseed hull fiber, motes and grabbets no longer collected monthly.

²Effective November 1958 data on running bales no longer collected.

³Data collected by Agricultural Marketing Service, U.S. Department of Agriculture.

⁴Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 3, PAGE 2.

*Revised.

NA Not available.

¹Data on olive oil and crude oils other than those listed no longer collected monthly.

²Data on production and stocks held at crude oil mill locations collected by Agricultural Marketing Service, U.S. Department of Agriculture.

³Not shown to avoid disclosure of figures for individual companies.

Table 4.—COTTONSEED: NET RECEIPTS, CRUSHINGS, AND STOCKS AT OIL MILLS, BY STATES,
JANUARY 1961—DECEMBER 1960

(Thousands of short tons)

State	Net receipts at mills ¹		Crushed or used		Stocks at mills	
	January 1961	December 1960	January 1961	December 1960	January 31, 1961	December 31, 1960

FOOTNOTES FOR TABLE 1, PAGE 1.

NA Not available.

¹Data on olives and raw materials other than those listed no longer collected monthly.

²Data on peanuts collected by Agricultural Marketing Service, U.S. Department of Agriculture, and include reports by peanut shellers.

³Discontinued because dry millers, accounting for approximately 20 percent of corn oil production, indicate they cannot report the quantities of corn germ crushed or cake and meal produced.

⁴Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 2, PAGE 1.

NA Not available.

¹Data on soy flour, lecithin, running bales of linters, cottonseed hull fiber, notes and grabbots no longer collected monthly.

²Effective November 1958 data on running bales no longer collected.

³Data collected by Agricultural Marketing Service, U.S. Department of Agriculture.

⁴Discontinued because dry millers, accounting for approximately 20 percent of corn oil production, indicate they cannot report the quantities of corn germ crushed or cake and meal produced.

⁵Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 3, PAGE 2.

NA Not available.

¹Data on olive oil and crude oils other than those listed no longer collected monthly.

²Data on production and stocks held at crude oil mill locations collected by Agricultural Marketing Service, U.S. Department of Agriculture.

³Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 1, PAGE 1.

*Revised.

NA Not available.

¹Data on olives and raw materials other than those listed no longer collected monthly.

²Data on peanuts collected by Agricultural Marketing Service, U.S. Department of Agriculture.

All figures, including stocks, are for crushing mills only.

³Discontinued because dry millers, accounting for approximately 20 percent of corn oil production, indicate they cannot report the quantities of corn germ crushed or cake and meal produced.

⁴Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 2, PAGE 1.

*Revised.

¹Data on soy flour, lecithin, running bales of linters, cottonseed hull fiber, notes and grabbots no longer collected monthly.

²Effective November 1958 data on running bales no longer collected.

³Data collected by Agricultural Marketing Service, U.S. Department of Agriculture.

⁴Discontinued because dry millers, accounting for approximately 20 percent of corn oil production, indicate they cannot report the quantities of corn germ crushed or cake and meal produced.

⁵Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 3, PAGE 2.

*Revised.

¹Data on olive oil and crude oils other than those listed no longer collected monthly.

²Data on production and stocks held at crude oil mill locations collected by Agricultural Marketing Service, U.S. Department of Agriculture.

³Not shown to avoid disclosure of figures for individual companies.

INTRODUCTION

The statistics contained in this publication are a summarization of the monthly 1959-1961 figures which have appeared in Current Industrial Reports Series M20J, Fats and Oils. The figures shown include all revisions to date and, therefore, supersede those published in previous issues.

The information contained in this report is limited to receipts and crushings of oilseeds; production of crude vegetable oils, oilseed cake and meal and other by-products; and stocks of seeds, crude oil, cake and meal, and byproducts at oil mills.

Information for corn germs previously reported on table 1 and corn oil cake and meal reported on table 2 have been discontinued. Dry millers accounting for approximately 20 percent of corn oil production indicate they cannot report the quantities of corn germ crushed or cake and meal produced.

Reports are collected on a calendar month basis. However, some companies which maintain their records on an accounting month, were permitted to file noncalendar month reports of four or five weeks, where converting to a calendar month basis would have been unusually burdensome or would have unduly delayed their reports.

A review of the reports for January 1960 indicated that reports from 82 of the 379 crushing mills were on an accounting month basis. Such mills accounted for about 30 percent of the cottonseed and 10 percent of the soybeans crushed. These percentages will probably vary with the season.

The effect of variations in the period covered in the M20J reports may be greater for the stock figures than for the production figures. In each month some of the accounting periods relate to four weeks, and others to five, and the effect on the production totals may be compensating. On a quarterly basis, the calendar month and accounting month totals will coincide more closely.

Effective November 1958, the M20J survey was confined to collecting information on the crushing of the principal oilseeds; cottonseed, soybean, flaxseed, copra, corn, peanut, palm kernel, and tung. Information on the production of soyflour, lecithin, running bales of linters, cottonseed hulls, and motes and grabbots are no longer collected.

Information relating to the operation of refineries and consumers for 1961 will appear in Current Industrial Reports Series M20K.

FOOTNOTES FOR TABLE 1, PAGE 1.

*Revised.

¹Data on olives and raw materials other than those listed no longer collected monthly.

²Data on peanuts collected by Statistical Reporting Service, U.S. Department of Agriculture.

All figures, including stocks, are for crushing mills only.

³Discontinued because dry millers, accounting for approximately 20 percent of corn oil production, indicate they cannot report the quantities of corn germ crushed or cake and meal produced.

⁴Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 2, PAGE 1.

*Revised.

¹Data on soy flour, lecithin, running bales of linters, cottonseed hull fiber, notes and grab-bots no longer collected monthly.

²Effective November 1958 data on running bales no longer collected.

³Data collected by Statistical Reporting Service, U.S. Department of Agriculture.

⁴Discontinued because dry millers, accounting for approximately 20 percent of corn oil production, indicate they cannot report the quantities of corn germ crushed or cake and meal produced.

⁵Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 3, PAGE 2.

*Revised.

¹Data on olive oil and crude oils other than those listed no longer collected monthly.

²Data on production and stocks held at crude oil mill locations collected by Statistical Reporting Service, U.S. Department of Agriculture.

³Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 1, PAGE 1.

*Revised.

¹Data on olives and raw materials other than those listed no longer collected monthly.

²Data on peanuts collected by Statistical Reporting Service, U.S. Department of Agriculture. All figures, including stocks, are for crushing mills only.

³Discontinued because dry millers, accounting for approximately 20 percent of corn oil production, indicate they cannot report the quantities of corn germ crushed or cake and meal produced.

⁴Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 2, PAGE 1.

*Revised.

¹Data on soy flour, lecithin, running bales of linters, cottonseed hull fiber, motes and grabbots no longer collected monthly.

²Effective November 1958 data on running bales no longer collected.

³Data collected by Statistical Reporting Service, U.S. Department of Agriculture.

⁴Discontinued because dry millers, accounting for approximately 20 percent of corn oil production, indicate they cannot report the quantities of corn germ crushed or cake and meal produced.

⁵Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 3, PAGE 2.

*Revised.

¹Data on olive oil and crude oils other than those listed no longer collected monthly.

²Data on production and stocks held at crude oil mill locations collected by Statistical Reporting Service, U.S. Department of Agriculture..

³Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 1, PAGE 1.

¹Data on olives and raw materials other than those listed no longer collected monthly.

²Data on peanuts collected by Statistical Reporting Service, U.S. Department of Agriculture. All figures, including stocks, are for crushing mills only.

³Discontinued because dry millers, accounting for approximately 20 percent of corn oil production, indicate they cannot report the quantities of corn germ crushed or cake and meal produced.

⁴Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 2, PAGE 1.

*Revised.

¹Data on soy flour, lecithin, running bales of linters, cottonseed hull fiber, motes and grabbots no longer collected monthly.

²Effective November 1958 data on running bales no longer collected.

³Data collected by Statistical Reporting Service, U.S. Department of Agriculture.

⁴Discontinued because dry millers, accounting for approximately 20 percent of corn oil production, indicate they cannot report the quantities of corn germ crushed or cake and meal produced.

⁵Not shown to avoid disclosure of figures for individual companies.

FOOTNOTES FOR TABLE 3, PAGE 2.

¹Data on olive oil and crude oils other than those listed no longer collected monthly.

²Data on production and stocks held at crude oil mill locations collected by Statistical Reporting Service, U.S. Department of Agriculture.

³Not shown to avoid disclosure of figures for individual companies.

SUGGESTED CITATION

U.S. Bureau of the Census, *Current Industrial Reports Series M20J(64)-13*
Fats and Oils, Vegetable Oil Crushers: Summary for 1964.
Washington, D.C., 1965.

The statistics contained in this publication are a summarization of the monthly 1962-1964 figures which have appeared in Current Industrial Reports Series M20J, Fats and Oils. The figures shown include all revisions to date, and therefore, supersede those published in previous issues.

The information contained in this report is limited to receipts and crushings of oilseeds; production of crude vegetable oils, oilseed cake and meal and other byproducts; and stocks of seeds, crude oil, cake and meal, and byproducts at oil mills. For the first time in this series we are including data showing quantity of cottonseed crushed and crude oil produced by method of extraction for cottonseed crushers. Data from the 1958 Census of Manufactures are given for comparison purposes. These data are contained in Table 8 of this publication.

Reports are collected on a calendar month basis. However, some companies which maintain their records on an accounting month were permitted to file noncalendar month reports of four or five weeks, where converting to a calendar month basis would have been unusually burdensome or would have unduly delayed their reports. A review of the reports for January 1960

indicated that reports from 82 of the 379 crushing mills were on an accounting month basis. Such mills accounted for about 30 percent of the cottonseed and 10 percent of the soybeans crushed. These percentages will probably vary with the season.

The effect of variations in the period covered in the M20J reports may be greater for the stock figures than for the production figures. In each month some of the accounting periods relate to four weeks, and others to five, and the effect on the production totals may be compensating. On a quarterly basis, the calendar month and accounting month totals will coincide more closely.

Effective November 1958, the M20J survey was confined to collecting information on the crushing of the principal oilseeds; cottonseed, soybean, flaxseed, copra, corn, peanut, palm kernel, and tung. Information on the production of soyflour, lecithin, running bales of linters, cottonseed hulls, and motes and grabbots are no longer collected. The U.S. Department of Agriculture publishes annually the tonnage of olives crushed for oil on a crop year basis.

Information relating to the operation of refineries and consumers for 1964 will appear in Current Industrial Reports Series M20K.

C H A N G E S H E E T

For the first four months of 1965 there was some over-reporting of Cottonseed Crushed in Texas.

These changes affect the data previously published in tables 1 and 5 of Series M20J(65)-1 through -4. Cottonseed Oil Mill Stocks and production of oil, cake and meal were not affected by this revision.

Month	COTTONSEED			
	Net receipts at mills		Crushed or used	
	As published	As revised	As published	As revised
U.S.:

U.S. Bureau of the Census, *Current Industrial Reports Series M20J(65)-13*
Fats and Oils, Vegetable Oil Crushers: Summary for 1965.
Washington, D.C., 1966.

Introduction

The statistics contained in this publication are a summarization of the monthly 1963 to 1965 figures which have appeared in Current Industrial Reports Series M20J, Fats and Oils. The figures shown include all revisions to date, and therefore, supersede those published in previous issues.

The information contained in this report is limited to receipts and crushings of oilseeds; production of crude vegetable oils, oilseed cake and meal and other byproducts; and stocks of seeds, crude oil, cake and meal, and byproducts at oil mills.

Reports are collected on a calendar month basis. However, some companies which maintain their records on an accounting month were permitted to file noncalendar month reports of four or five weeks, where converting to a calendar month basis would have been unusually burdensome or would have unduly delayed their reports. A review of the reports for January 1960 indicated that reports from 82 of the 379 crushing mills were on an accounting month basis. Such mills accounted for about 30 percent of the cottonseed and 10 percent of the soybeans crushed.

These percentages will probably vary with the season.

The effect of variations in the period covered in the M20J reports may be greater for the stock figures than for the production figures. In each month some of the accounting periods relate to four weeks, and others to five, and the effect on the production totals may be compensating. On a quarterly basis, the calendar month and accounting month totals will coincide more closely.

The M20J survey is confined to collecting information on the crushing of the principal oilseeds; cottonseed, soybean, flaxseed, copra, peanut, safflower seed, castor beans and tung nuts. Information on the production of soyflour, lecithin, running bales of linters, cottonseed hulls, and motes and grabbots are no longer collected. The U.S. Department of Agriculture publishes annually the tonnage of olives crushed for oil on a crop year basis.

Information relating to the operation of refineries and consumers for 1965 will appear in Current Industrial Reports Series M20K.

Introduction

The statistics contained in this publication are a summarization of the monthly 1964 to 1966 figures which have appeared in Current Industrial Reports Series M20J, Fats and Oils. The figures shown include all revisions to date, and therefore, supersede those published in previous issues.

The information contained in this report is limited to receipts and crushings of oilseeds; production of crude vegetable oils, oilseed cake and meal and other byproducts; and stocks of seeds, crude oil, cake and meal, and byproducts at oil mills.

Reports are collected on a calendar month basis. However, some companies which maintain their records on an accounting month were permitted to file noncalendar month reports of four or five weeks, where converting to a calendar month basis would have been unusually burdensome or would have unduly delayed their reports. A review of the reports for January 1960 indicated that reports from 82 of the 379 crushing mills were on an accounting

month basis. Such mills accounted for about 30 percent of the cottonseed and 10 percent of the soybeans crushed. These percentages will probably vary with the season.

The effect of variations in the period covered in the M20J reports may be greater for the stock figures than for the production figures. In each month some of the accounting periods relate to four weeks, and others to five, and the effect on the production totals may be compensating. On a quarterly basis, the calendar month and accounting month totals will coincide more closely.

The M20J survey is confined to collecting information on the crushing of the following oilseeds; cottonseed, soybean, flaxseed, copra, peanut, safflower seed, castor beans and tung nuts. The U.S. Department of Agriculture publishes annually the tonnage of olives crushed for oil on a crop year basis.

Information on the operations of refineries and other consumers of fats and oils is published in Current Industrial Reports Series M20K.

STATISTICAL ABSTRACT

OF THE UNITED STATES

1967 EDITION

PUBLISHED BY
BUREAU OF THE CENSUS
U.S. DEPARTMENT OF COMMERCE

88th
Annual
Edition

Includes special 48-page section of
current data on metropolitan areas

The Statistical Abstract is an authoritative, current, and comprehensive collection of facts and figures on the economic, political, and social structure of the United States.

The 1967 edition presents broad statistical coverage of such subjects as —

Agriculture	Education	Housing	Population
Banking	Employment	Income	Poverty
Business	Expenditures	Insurance	Prices
Construction	Foreign affairs	Manufactures	Transportation
Crime	Health	National Defense	Veterans

ANYONE who needs facts about the United States today should have a copy of the new Abstract within arm's reach. 1284 statistical tables • 53 charts • Guide to sources • Weights and measures appendix • Alphabetical subject index

1,050 pp. (cloth) \$4.00 per copy

Order from: Superintendent of Documents
U.S. Government Printing Office
Washington, D. C. 20402
or
Any U.S. Department of Commerce
Field Office

Enclosed is \$ (check, money order, Supt. Docs. coupons, or charge Deposit Account No.)

Send me copy(ies) of Statistical Abstract of the United States, 1967 Edition at \$4.00 each.

FATS AND OILS
Vegetable Oil Crushers

FOR RELEASE: January 3, 1968

SERIES: M20J(66)-13

In Series M20J(66)-13, Summary for 1966, released November 30, 1967, revisions of 1966 data for safflower products should be made as follows:

Item	As published	As revised
<u>Table 1, Page 2</u>		
Safflower seed:		
Receipts at mills.....	179.1	197.6
Crushed or used.....	180.0	198.5
<u>Table 2, Page 3</u>		
Safflower seed cake and meal:		
Production.....	129.9	120.9
Shipments and transfers.....	124.4	115.4
<u>Table 3, Page 4</u>		
Safflower crude oil:		
Production.....	157.1	146.7

FATS AND OILS

Oil Seed Crashings

January 1967

FOR RELEASE: 10 a.m. E.S.T., February 21, 1967

SERIES: M20J-(67)1 (Preliminary)

Table 1.—RAW MATERIALS AT OIL MILLS: NET RECEIPTS, CRUSHINGS, AND STOCKS

(Thousands of short tons)

Raw materials	Net receipts at mills ¹ January 1967 ^P	Crushed or used		Oil mill stocks end of month	
		January 1967 ^P	December 1966 ^F	January 31, 1967 ^P	December 31, 1966 ^F

FOOTNOTES FOR TABLE 1, PAGE 1.

^pPreliminary. ^rRevised. (D) Withheld to avoid disclosing data for individual companies.
(NA) Not available.

¹Net receipts for each oil are derived from the quantity of bean, seed, or nut crushed and net change in stocks.

²Data collected by Statistical Reporting Service, U.S. Department of Agriculture.

³November revised to 3413.8 to correct reporting errors.

FOOTNOTES FOR TABLE 2, PAGE 1.

^pPreliminary. ^rRevised. (D) Withheld to avoid disclosing data for individual companies.
(NA) Not available.

¹Data reported in gross weight and converted to running bales using the following factors: 1st cut - 626 lbs., 2nd cut 634 lbs., and mill run - 622 lbs.

²Shipments and transfers for each product are derived from quantity of product produced and net change in stocks.

³Data collected by Statistical Reporting Service, U.S. Department of Agriculture.

⁴Excludes peanut.

FOOTNOTES FOR TABLE 3, PAGE 2.

^pPreliminary. ^rRevised. (D) Withheld to avoid disclosing data for individual companies.
(NA) Not available.

¹Data by Statistical Reporting Service, U.S. Department of Agriculture.

Table 4.--COTTONSEED LINTERS--PRODUCTION AND END OF MONTH STOCKS AT OIL MILL LOCATIONS, BY TYPES OF CUT AND GEOGRAPHIC AREAS

(Thousands of equivalent running bales)¹

Production and stocks by geographic area	Total		1st cut		2nd cut		Mill run	
	Jan. 1967 ^p	Dec. 1966 ^r	Jan. 1967 ^p	Dec. 1966 ^r	Jan. 1967 ^p	Dec. 1966 ^r	Jan. 1967 ^p	Dec. 1966 ^r

ACKNOWLEDGMENTS.--This report was prepared in the Industry Division under the direction of Robert J. Nealon, Chief of the Foods, Textiles, and Apparel Branch. Charles H. W. Sedgewick, Chief, Foods, assisted by Albert G. Porach, was directly responsible for the review of the data and preparation of the report. Milton Eisen, Assistant Chief of the Division, provided overall direction and coordination to this project.

Introduction

The statistics contained in this publication are a summarization of the monthly 1965 to 1967 figures which have appeared in Current Industrial Reports Series M20J, Fats and Oils. The figures shown include all revisions to date, and therefore, supersede those published in previous issues.

The information contained in this report is limited to receipts and crushings of oilseeds; production of crude vegetable oils, oilseed cake and meal and other byproducts; and stocks of seeds, crude oil, cake and meal, and byproducts at oil mills.

Reports are collected on a calendar month basis. However, some companies which maintain their records on an accounting month were permitted to file noncalendar month reports of four or five weeks, where converting to a calendar month basis would have been unusually burdensome or would have unduly delayed their reports. A review of the reports for January 1960 indicated that reports from 82 of the 379 crushing mills were on an accounting month basis. Such mills accounted for about 30 percent of the cottonseed and

10 percent of the soybeans crushed. These percentages will probably vary with the season.

The effect of variations in the period covered in the M20J reports may be greater for the stock figures than for the production figures. In each month some of the accounting periods relate to four weeks, and others to five, and the effect on the production totals may be compensating. On a quarterly basis, the calendar month and accounting month totals will coincide more closely.

The M20J survey is confined to collecting information on the crushing of the following oilseeds; cottonseed, soybean, flaxseed, copra, peanut, safflower seed, castor beans and tung nuts. The U.S. Department of Agriculture publishes annually the tonnage of olives crushed for oil on a crop year basis.

Table 5D containing data on cottonseed and cottonseed products for crop year, by States, is published for the first time in this report.

Information on the operations of refineries and other consumers of fats and oils is published in Current Industrial Reports Series M20K.

Change Sheet

FATS AND OILS

Oilseed Crushings

FOR RELEASE: March 27, 1968

Series M20J

During the months May-December, 1967 there was under-reporting in soybean crushing activity. The revisions shown below affect the data regarding soybeans and soybean products in tables 1, 2, 3, 7 and 8 of Series M20J for these months.

Revised data by State will be published in the M20J Annual Summary for 1967.

CURRENT INDUSTRIAL REPORTS

Fats and Oils

Oilseed Crashings

August 1968 (Preliminary)

FOR RELEASE: September 24, 1968, 10 a.m., E.D.T.

SERIES: M20J(68)-8

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 6.

^rRevised by 5 percent or more from previously published figure. (D) Withheld to avoid disclosing data for individual companies.¹Includes millfeed (hull meal).

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

- Net receipts at mills (current month)
- = Amount of material crushed (current month)
- + Amount of stocks (end of current month)
- Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

- Shipments and transfers (current month)
- = Amount of production (current month)
- + Amount of stocks (end of previous month)
- Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

CURRENT INDUSTRIAL REPORTS

Fats and Oils Oilseed Crushings

September 1968 (Preliminary)

FOR RELEASE: October 21, 1968, 10 a.m. E.D.T.

SERIES: M20J(68)-9

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 6.

^rRevised by 5 percent or more from previously published figure. (D) Withheld to avoid disclosing data for individual companies.¹Includes millfeed (hull meal).

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

- Net receipts at mills (current month)
- Amount of material crushed (current month)
- + Amount of stocks (end of current month)
- Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

- Shipments and transfers (current month)
- Amount of production (current month)
- + Amount of stocks (end of previous month)
- Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

CURRENT INDUSTRIAL REPORTS

Fats and Oils Oilseed Crashings

October 1968 (Preliminary)

FOR RELEASE: November 27, 1968, 10 a.m. E.S.T.

SERIES: M20J(68)-10

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 6.

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

Net receipts at mills (current month)
 = Amount of material crushed (current month)
 + Amount of stocks (end of current month)
 - Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

Shipments and transfers (current month)
 = Amount of production (current month)
 + Amount of stocks (end of previous month)
 - Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

CURRENT INDUSTRIAL REPORTS

Fats and Oils Oilseed Crushings

November 1968 (Preliminary)

FOR RELEASE: December 23, 1968, 10 a.m., E.S.T.

SERIES: M20J(68)-11

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 6.

¹Includes millfeed (hull meal).

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

Net receipts at mills (current month)
 = Amount of material crushed (current month)
 + Amount of stocks (end of current month)
 - Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

Shipments and transfers (current month)
 = Amount of production (current month)
 + Amount of stocks (end of previous month)
 - Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

CURRENT INDUSTRIAL REPORTS

Fats and Oils Oilseed Crashings

December 1968 (Preliminary)

FOR RELEASE: January 21, 1969, 10 a.m. E.S.T.

SERIES: M20J(68)-12

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 6.

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

- Net receipts at mills (current month)
- = Amount of material crushed (current month)
- + Amount of stocks (end of current month)
- Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

- Shipments and transfers (current month)
- = Amount of production (current month)
- + Amount of stocks (end of previous month)
- Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

INTRODUCTION

The statistics contained in this publication are a summarization of the monthly 1966 to 1968 figures which have appeared in Current Industrial Reports Series M20J, Fats and Oils. The figures shown include all revisions to date, and therefore, supersede those published in previous issues.

The information contained in this report is limited to receipts and crushings of oilseeds; production of crude vegetable oils, oilseed cake and meal and other byproducts; and stocks of seeds, crude oil, cake and meal, and byproducts at oil mills.

Reports are collected on a calendar month basis. However, some companies which maintain their records on an accounting month were permitted to file noncalendar month reports of four or five weeks, where converting to a calendar month basis would have been unusually burdensome or would have unduly delayed their reports. A review of the reports for January 1960 indicated that reports from 82 of the 379 crushing mills were on an accounting month basis. Such mills accounted for

about 30 percent of the cottonseed and 10 percent of the soybeans crushed. These percentages will probably vary with the season.

The effect of variations in the period covered in the M20J reports may be greater for the stock figures than for the production figures. In each month some of the accounting periods relate to four weeks, and others to five, and the effect on the production totals may be compensating. On a quarterly basis, the calendar month and accounting month totals will coincide more closely.

The M20J survey is confined to collecting information on the crushing of the following oilseeds; cottonseed, soybean, flaxseed, copra, peanut, safflower seed, castor beans and tung nuts. The U.S. Department of Agriculture publishes annually the tonnage of olives crushed for oil on a crop year basis.

Information on the operations of refineries and other consumers of fats and oils is published in Current Industrial Reports Series M20K.

CURRENT INDUSTRIAL REPORTS

Fats and Oils
Oilseed Crushings

January 1969 (Preliminary)

FOR RELEASE: February 25, 1969, 10 a.m. E.S.T.

SERIES: M20J(69)-1

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 6.

¹Includes millfeed (hull meal).

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

Net receipts at mills (current month)
= Amount of material crushed (current month)
+ Amount of stocks (end of current month)
- Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

Shipments and transfers (current month)
= Amount of production (current month)
+ Amount of stocks (end of previous month)
- Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

CURRENT INDUSTRIAL REPORTS

Fats and Oils

Oilseed Crushings

February 1969 (Preliminary)

FOR RELEASE: March 24, 1969, 10 a.m. E.S.T.

SERIES: M20J(69)-2

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 6.

^rRevised by 5 percent or more from previously published figure. (D) Withheld to avoid disclosing data for individual companies.¹Includes millfeed (hull meal).

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

Net receipts at mills (current month)
= Amount of material crushed (current month)
+ Amount of stocks (end of current month)
- Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

Shipments and transfers (current month)
= Amount of production (current month)
+ Amount of stocks (end of previous month)
- Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

CURRENT INDUSTRIAL REPORTS

Fats and Oils
Oilseed Crushings

March 1969 (Preliminary)

FOR RELEASE: April 17, 1969, 10 a.m. E.S.T.

SERIES: M20J(69)-3

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 6.

¹Includes millfeed (hull meal).

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

Net receipts at mills (current month)
 = Amount of material crushed (current month)
 + Amount of stocks (end of current month)
 - Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

Shipments and transfers (current month)
 = Amount of production (current month)
 + Amount of stocks (end of previous month)
 - Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

CURRENT INDUSTRIAL REPORTS

Fats and Oils Oilseed Crushings

April 1969 (Preliminary)

FOR RELEASE: May 20, 1969, 10 a.m. E.S.T.

SERIES: M20J(69)-4

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 6.

¹Includes millfeed (hull meal).

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

Net receipts at mills (current month)
= Amount of material crushed (current month)
+ Amount of stocks (end of current month)
- Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

Shipments and transfers (current month)
= Amount of production (current month)
+ Amount of stocks (end of previous month)
- Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

CURRENT INDUSTRIAL REPORTS

Fats and Oils Oilseed Crushings

May 1969 (Preliminary)

FOR RELEASE: June 23, 1969, 10 a.m. D.S.T.

SERIES: M20J(69)-5

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 6.

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

Net receipts at mills (current month)
= Amount of material crushed (current month)
+ Amount of stocks (end of current month)
- Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

Shipments and transfers (current month)
= Amount of production (current month)
+ Amount of stocks (end of previous month)
- Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

Fats and Oils Oilseed Crushings

June 1969 (Preliminary)

FOR RELEASE: July 28, 1969, 10 a.m., D.S.T.

SERIES: M20J(69)-6

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 6.

¹Includes millfeed (hull meal).

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

Net receipts at mills (current month)
 = Amount of material crushed (current month)
 + Amount of stocks (end of current month)
 - Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

Shipments and transfers (current month)
 = Amount of production (current month)
 + Amount of stocks (end of previous month)
 - Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

CURRENT INDUSTRIAL REPORTS

Fats and Oils Oilseed Crushings

July 1969 (Preliminary)

FOR RELEASE: August 27, 1969, 10 a.m., D.S.T.

SERIES: M20J(69)-7

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 6.

¹Includes millfeed (hull meal).

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

Net receipts at mills (current month)
 = Amount of material crushed (current month)
 + Amount of stocks (end of current month)
 - Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

Shipments and transfers (current month)
 = Amount of production (current month)
 + Amount of stocks (end of previous month)
 - Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

CURRENT INDUSTRIAL REPORTS

Fats and Oils Oilseed Crushings

August 1969 (Preliminary)

FOR RELEASE: September 26, 1969, 10 a.m. D.S.T.

SERIES: M20J(69)-8

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 7.

¹Includes millfeed (hull meal).

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

Net receipts at mills (current month)
 = Amount of material crushed (current month)
 + Amount of stocks (end of current month)
 - Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

Shipments and transfers (current month)
 = Amount of production (current month)
 + Amount of stocks (end of previous month)
 - Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

**Fats and Oils
Oilseed Crashings**

September 1969 (Preliminary)

FOR RELEASE: October 23, 1969, 10 a.m. D.S.T

SERIES: M20J(69)-9

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 7.

¹Includes millfeed (hull meal).

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

- Net receipts at mills (current month)
- = Amount of material crushed (current month)
- + Amount of stocks (end of current month)
- Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

- Shipments and transfers (current month)
- = Amount of production (current month)
- + Amount of stocks (end of previous month)
- Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

CURRENT INDUSTRIAL REPORTS

Fats and Oils
Oilseed Crushings

November 1969 (Preliminary)

FOR RELEASE: December 23, 1969, 10 a.m. E.S.T.

SERIES: M20J(69)-11

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 7.

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

- Net receipts at mills (current month)
- = Amount of material crushed (current month)
- + Amount of stocks (end of current month)
- Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

- Shipments and transfers (current month)
- = Amount of production (current month)
- + Amount of stocks (end of previous month)
- Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

Fats and Oils
Oilseed Crushings

October 1969 (Preliminary)

FOR RELEASE: November 25, 1969, 10 a.m. E.S.T.

SERIES: M20J(69)-10

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 7.

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

Net receipts at mills (current month)
 = Amount of material crushed (current month)
 + Amount of stocks (end of current month)
 - Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

Shipments and transfers (current month)
 = Amount of production (current month)
 + Amount of stocks (end of previous month)
 - Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

CURRENT INDUSTRIAL REPORTS

Fats and Oils
Oilseed Crashings

December 1969 (Preliminary)

FOR RELEASE: January 26, 1970, 10 a.m. E.S.T.

SERIES: M20J(69)-12

The statistics in this publication are based on a survey of oilseed extraction plants. The data represent the entire U.S. oil extraction activity for the principal oilseeds. Estimates are included for companies whose reports were not received in time for tabulation. A more complete description of the survey appears on page 7.

DESCRIPTION OF SURVEY

The statistics in this publication were collected on Census Form M20J, Oilseeds, Beans, and Nuts, Monthly Report of Primary Processors.

The current month's figures may include estimates for respondents whose reports were not received in time for tabulation. Such missing figures are imputed from the month-to-month movements shown by reporting firms and are generally limited to a maximum of 10 percent to any one item. Individual items with higher imputation rates are footnoted.

The imputation rate is not an explicit indicator of the potential error in published figures due to nonresponse, because the actual monthly movements for nonrespondents may or may not closely agree with the imputed movements. The probable range of difference between the actual and imputed figures is unknown. The degree of uncertainty regarding the accuracy of the data, however, increases as the percentage of imputation increases. Figures with high imputation rates, therefore, should be used with caution.

Statistics for previous months may be revised, due to receipt of corrected data from respondents, including late reports for which estimates were made and other corrections. Figures which are revised significantly are indicated by footnotes.

The data are not adjusted for seasonal variation or number of working days.

RELATED REPORTS

An annual Current Industrial Report which includes only summary data is also published in

this series. Other related data are published monthly with annual summary Current Industrial Reports Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

EXPLANATION OF TERMS

Net Receipts at Mills.--Figures under this heading are derived as follows:

- Net receipts at mills (current month)
- = Amount of material crushed (current month)
- + Amount of stocks (end of current month)
- Amount of stocks (end of previous month)

Shipments and Transfers.--Figures under this heading are derived as follows:

- Shipments and transfers (current month)
- = Amount of production (current month)
- + Amount of stocks (end of previous month)
- Amount of stocks (end of current month)

Linters.--Linters are defined to be the fuzz or short fibers that adhere to cottonseed after ginning.

Hulls.--For the purposes of this report, hulls are defined to be the outer covering of cottonseeds or soybeans.

Cake and Meal.--This term describes the residue left after the oil is extracted from a seed, nut, or kernel.

Crude Vegetable Oils.--In general, the oils for which data appear in this publication are considered to be crude oils until they have been processed by an alkali or caustic wash or by some equivalent operation.

INTRODUCTION

The statistics contained in this publication are a summarization of the monthly 1967 to 1969 figures which have appeared in Current Industrial Reports Series M20J, Fats and Oils. The figures shown include all revisions to date, and therefore, supersede those published in previous issues.

The information contained in this report is limited to receipts and crushings of oilseeds; production of crude vegetable oils, oilseed cake and meal and other byproducts; and stocks of seeds, crude oil, cake and meal, and byproducts at oil mills.

Reports are collected on a calendar month basis. However, some companies which maintain their records on an accounting month were permitted to file noncalendar month reports of four or five weeks, where converting to a calendar month basis would have been unusually burdensome or would have unduly delayed their reports. A review of the reports for October 1970 indicated that reports from 82 of the 379 crushing mills were on an accounting month basis. Such mills accounted for

about 30 percent of the cottonseed and 10 percent of the soybeans crushed. These percentages will probably vary with the season.

The effect of variations in the period covered in the M20J reports may be greater for the stock figures than for the production figures. In each month some of the accounting periods relate to four weeks, and others to five, and the effect on the production totals may be compensating. On a quarterly basis, the calendar month and accounting month totals will coincide more closely.

The M20J survey is confined to collecting information on the crushing of the following oilseeds; cottonseed, soybean, flaxseed, copra, peanut, safflower seed, castor beans and tung nuts. The U.S. Department of Agriculture publishes annually the tonnage of olives crushed for oil on a crop year basis.

Information on the operations of refineries and other consumers of fats and oils is published in Current Industrial Reports Series M20K.

M20J Supplement

CURRENT INDUSTRIAL REPORTS

Fats and Oils

Seasonal Adjustment Supplement

1959 to 1969

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: October 15, 1970

SERIES: M20J Supplement

This report presents seasonally adjusted data for a number of the most important series published monthly in Current Industrial Reports Series M20J, Fats and Oils--Oilseed Crushings, and M20K, Fats and Oils--Production, Consumption and Stocks. The seasonal adjustment program largely eliminates the effect of normal seasonal variations (including variations due to vacations, weather, etc.) as measured over the time period for which data were used. The resulting information thus provides a better measure than the original data of the month-to-month variations which are due to factors that are not associated with a repetitive seasonal pattern.

The seasonal adjustments were made using the X-11 variant of the Census Bureau's seasonal adjustment program. The X-11 variant of the seasonal adjustment program has developed improved techniques for the treatment of extremes and a regression program to identify trading-day adjustment to the monthly aggregates. The trading-day routine is optional and has been used for the series presented in this publication. This program is amply described in the literature on this method.¹ It should be noted that the data included in this report have not been adjusted on an establishment basis, prior to tabulation for variation in the length of the reporting period such as 4-week, 5-week, or calendar month.

¹Electronic Computers and Business Indicators, National Bureau of Economic Research Occasional Paper 57 (New York, 1957); Tests and Revisions of Bureau of the Census Methods of Seasonal Adjustments, Bureau of the Census Technical Paper No. 5 (Washington, 1961, \$1.00); The X-11 Variant of the Census Method 11 Seasonal Adjustment Program, Bureau of the Census Technical Paper No. 15 (Washington, 1967, \$0.50).

For each series included in this report the following tables are shown:

- (1) Seasonally-adjusted data
- (2) Data without seasonal adjustment (original series)
- (3) Seasonal adjustment factors. The seasonally-adjusted data are obtained by dividing the unadjusted data by the seasonal factors for the specific month.
- (4) Average percentage changes and related measures for each series.

Beginning in October 1970, these seasonally adjusted data will be included in table 1 of the regular M20J and M20K reports. That report also includes a detailed description of the survey, including a discussion of the scope and coverage of the report together with an explanation of the terms.

TRADING-DAY FACTORS

Variation in the rate of activity that arises from the existence of different numbers of trading days in the same month for different years can be an important cause of month-to-month irregular fluctuations. Unlike some other causes of irregular fluctuations such as unexpected economic developments, unusual weather, and statistical errors, trading-day irregularities can be approximately identified and removed so that the underlying trend-cycle stands out more clearly. Hence, it is often possible to reduce the irregular factor by a trading-day adjustment.

BRIEF DEFINITIONS OF MEASURES SHOWN IN TABLE 4

The following are brief definitions; more complete explanations appear in Electronic Computers and Business Indicators, by Julius Shiskin, issued as Occasional Paper 57 by the National Bureau of Economic Research, 1957 (reprinted from Journal of Business, October 1957).

" \overline{CI} " is the average month-to-month percentage change, without regard to sign, in the seasonally adjusted series (i.e., the series after adjustment for measurable seasonal, trading-day, and holiday variations).

" \overline{I} " is the same for the irregular component, obtained by dividing the cyclical component into the seasonally adjusted series.

" \overline{C} " is the same for the cyclical component, a smooth, flexible moving average of the seasonally adjusted series.

" $\overline{I/C}$ " is a measure of the relative smoothness (small values) or irregularity (large values) of the seasonally adjusted series. It is shown for 1-month spans and for spans of the period of MCD. When MCD is "6", no $\overline{I/C}$ ratio is shown for the MCD period.

"MCD" (months for cyclical dominance) provides an estimate of the appropriate time span

over which to observe cyclical movements in a monthly series. It is small for smooth series and large for irregular series. In deriving MCD, percentage changes are computed separately for the irregular component and the cyclical component over 1-month spans (Jan.-Feb., Feb.-Mar., etc.), 2-months spans (Jan.-Mar., Feb.-Apr., etc.), up to 12-month spans. Averages, without regard to sign, are then computed for the changes over each span. MCD is the shortest span in months for which the average percentage change (without regard to sign) in the cyclical component is larger than the average percentage change (without regard to sign) in the irregular component, and remains so. Thus, it indicates the point at which fluctuations in the seasonally adjusted series became dominated by cyclical rather than irregular movements. All series with an MCD greater than "5" are shown as "6."

"Average Duration of Run" (ADR) is another measure of smoothness and is equal to the average number of consecutive monthly changes in the same direction in any series of observations. When there is no change between 2 months, a change in the same direction as the preceding change is assumed. The ADR is shown for the seasonally adjusted series CI , irregular component I , cyclical component C , and the MCD curve. The MCD curve is an unweighted moving average (with the number of terms equal to MCD) of the seasonally adjusted series.

Seasonal Adjustment Supplement
1959 to 1969

U.S. DEPARTMENT OF COMMERCE / Bureau of the Census

FOR RELEASE: November 24, 1970

SERIES: M20J Supplement

The seasonal factors shown in tables 3A through 3I (excluding table 3E) of the M20J Supplement released October 15 are in error as they do not include adjustment for the number of trading days in the month. However, the figures presented in tables 1, 2, and 4 of the original report are correct. The factors shown in this release (tables 3A through 3I) include seasonal factors combined with final trading day factors and supplement those previously published.

1970

... a NEW decade ... and a NEW LOOK for the 1970 STATISTICAL ABSTRACT OF THE UNITED STATES!

1042 Pages
(CLOTH) \$5.75

Between the covers of this 91st edition of the "Stat Abstract," as it is popularly known, are the Nation's most sought-after facts and figures in the world of government and private enterprise. Statesmen . . . businessmen . . . scientists . . . teachers and students alike FIND the information they want on the social, economic, and governmental characteristics of the United States — both current and historical. Statistics are presented in over 1,300 tables and charts derived from over 200 government, private, and international agencies. A special introductory table features RECENT TRENDS for selected measures of social and economic change. The GUIDE TO SOURCES lists over 800 statistical publications on 50 major subjects, such as population, government, health, education, agriculture, industry, construction, recreation, trade, and scores of other subjects. Whatever your line of work, business, profession, or avocational interests — when you need the facts, you want THE comprehensive and authoritative STATISTICAL ABSTRACT of the United States, 1970!

For users of urban information, the Abstract features an individual 66-page section of current data for over 200 metropolitan areas entitled, "Metropolitan Area Statistics." available as a separate reprint, priced at 35¢.

Order Form

Enclosed is \$_____ (send check, money order or Sup. Docs. coupon) for:

To: Superintendent of Documents
